

Arithmetic part of Grammar

This is a small grammar for arithmetic expressions. It supports the given below operator:

- +
- -
- *
- /
- %

The grammar is written in EBNF.

Expr = Term, { ("+" | "-"), Term } ;

Term = Factor, { ("*" | "/" | "%"), Factor } ;

Factor = Number
| "(", Expr, ")" ;

Number = Digit, { Digit }, [".", Digit, { Digit }] ;

Digit = "0" | "1" | "2" | "3" | "4"
| "5" | "6" | "7" | "8" | "9" ;

Some Examples are as

- 1 + 2 * 3
- (4 + 5) % 2
- 10 / 2 - 3
